

## A photograph of the internal components of a transparent computer mouse. The mouse is shown from a top-down perspective, revealing the internal mechanical structure. The main body is made of clear plastic, and the internal components are visible. On the left side, there are two mechanical switches with gold-colored contacts. In the center, there is a red rectangular component, likely a microcontroller or a sensor. On the right side, there are two more mechanical switches with gold-colored contacts. A white cable is attached to the bottom of the mouse. The background is a dark blue surface.
